#### INCLUDED:

Mini Amp  
Speakers  
Wired Input  
Blue tooth Input

#### TOOLS NEEDED:

Phillips Screw Driver  
Wire Stripper  
Crimp Tool

Mini Amp

Speakers

Wired Input

Blue tooth Input

Madjax recommends professional installation. If you choose to not have this product installed by a professional, we highly recommend that you exercise caution, care, and patience when installing this product.

# 1

Make sure your cart's TOW/RUN switch is in the tow position.

# 2

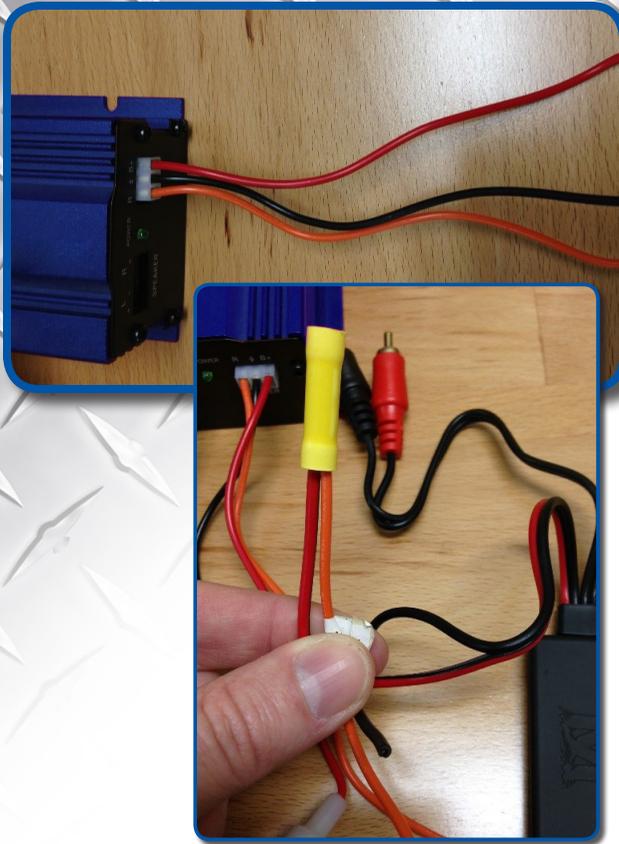

Locate where you would like to mount your mini amp.

**Note:** Do not mount in battery box if you are using the blue tooth Receiver

# 3

Run your wires for your power source and ground to the amp.

**Note:** We recommend using a MJ1612VR or MJ1230C converter to insure a clean 12V input.

You will make your connections as follows:

The mini amp will have three wires coming from the power pigtail. There will be (1) black, (1) red and (1) orange. Black is negative. Red is 12+ and the orange is the switch leg. You need to run the red to your 12+ power source, the black to your ground and the orange to your switch (**not the key switch**). Most cars will have full battery pack voltage (36/48) at the key switch and that will burn up your amp. You need to install a switch to turn the amp on and off.

**Note:** If you are using a blue tooth receiver, you will tie the red wire from the blue tooth in with the orange wire as shown.

### (Wired input)

Locate where you would like your input will be located. Drill a 7/8" hole to mount wired input connector as shown.

### (Blue Tooth)

You will need to pair your device with the blue tooth receiver. Turn on your device and search for the signal. Once your device has found the blue tooth receiver it will ask for a pairing code. That code is "0000". You will only need to do this once.

## INSTALLATION COMPLETE
